Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) J Zecher

This reference and text provides a solid understanding of the internal functions of graphics-oriented CAD/CAM software and the methods used to develop it - emphasizing the mathematical and programming techniques necessary for describing geometric models and the organization of associated data. An IBM compatible disk containing the programs discussed - designed to be run on the QuickBASIC language with VGA graphics - that demonstrates how concepts are transformed into working computer software, is supplied.;Offering a range of programs and program segments, this title examines: computer graphic hardware as well as primitives, viewports, windows, graphs and charts; 2-D and 3-D transformations, free-form curves, and graphical databases; user interface techniques and animation; 3-D modelling, curves, surfaces and working planes; hidden line/surface removal; and CAD/CAM applications, including finite element modelling and interfacing geometric data.;As a primary text in the classroom or for self-study, Computer Graphics for CAM/CAD Systems incorporates didactic features such as: a fully functional 2-D CAD program on the disk, complete with source codes, that can be used to instruct students on program writing; example programs that can be illustrated during lectures using the disk; end-of-chapter problems with selected answers; and a step-by-step methodology that progressively reinforces previously covered material.;This work is also intended as a reference for software, hardware, mechanical, manufacturing and design engineers working with CAD/CAM systems; operators and managers; draftspersons; and upper-level undergraduates and graduates in computer graphics, computer-aided engineering and computer-aided design.

From reader reviews:

Tammy Lugo:

This book entitled Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) to be one of several books this best seller in this year, this is because when you read this e-book you can get a lot of benefit upon it. You will easily to buy this book in the book retailer or you can order it through online. The publisher on this book sells the e-book too. It makes you quicker to read this book, as you can read this book in your Cell phone. So there is no reason for your requirements to past this book from your list.

Joe Hessler:

Reading can called head hangout, why? Because if you are reading a book particularly book entitled Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) your thoughts will drift away trough every dimension, wandering in every single aspect that maybe not known for but surely can become your mind friends. Imaging every word written in a e-book then become one form conclusion and explanation this maybe you never get ahead of. The Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) giving you one more experience more than blown away the mind but also giving you useful facts for your better life in this era. So now let us present to you the relaxing pattern here is your body and mind will probably be pleased when you are finished examining it, like winning a casino game. Do you want to try this extraordinary spending spare time activity?

Rachel Addison:

Your reading sixth sense will not betray anyone, why because this Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) guide written by well-known writer whose to say well how to make book which can be understand by anyone who read the book. Written throughout good manner for you, still dripping wet every ideas and publishing skill only for eliminate your personal hunger then you still skepticism Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) as good book not only by the cover but also with the content. This is one publication that can break don't determine book by its deal with, so do you still needing one more sixth sense to pick that!? Oh come on your looking at sixth sense already alerted you so why you have to listening to a different sixth sense.

Roger Moxley:

Many people said that they feel fed up when they reading a publication. They are directly felt this when they get a half parts of the book. You can choose the actual book Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) to make your current reading is interesting. Your personal skill of reading skill is developing when you similar to reading. Try to choose straightforward book to make you enjoy to read it and mingle the sensation about book and studying especially. It is to be initially opinion for you to like to wide open a book and go through it. Beside that the publication Computer Graphics for CAD/CAM Systems (Computer Aided Engineering) can to be your friend when you're truly feel alone and confuse with

the information must you're doing of the time.
