**Decision Support Systems for Multicriteria Transportation Problems** John Current, João Clímaco

The purpose of this book is to demonstrate how interactive, PC-based support systems can incorporate mathematical programming and visual display techniques to facilitate the generation and analysis of solutions to multicriteria transportation problems. The book is intended to address the interests of three different, but overlapping audiences: practitioners, students and researchers. To accomplish this, it will describe the multi-objective nature of transportation infrastructure design and routine problems; provide general overviews of multi-objective analysis and decision support systems; present specific applications of DSS to multi-objective transportation problems; provide references which cover specific concepts in more detail; and suggest areas for future research.
