The thrilling story of life that clearly introduces readers to the specific biological subject is examined in these narratives, exploring the history of each, and presenting the modern thinking at issue. Cell biology, microbes, genetics, human reproduction, the human body, ecology, plants, animal systems, evolution, and basic biology concepts as well as field and lab methods and data analysis are topics that are investigated and analyzed. These instructive volumes support Common Core science standards (such as use of math, scientific questioning, data collection strategies, evaluation of evidence, understanding scientific theories, and connecting and relating knowledge) with content that inspires thinking, reading, writing, and discussion among students. Fundamental life-science concepts are enlivened by the vivid photographs, instructive illustrations, and informative sidebars. These include Try This panels that provide readers with safe experiments to perform, What Do You Think? boxes that ask students questions that assess their reading comprehension skills, and Applications panels that explain how biological knowledge improves daily life and technology. Each volume includes the biography of an acclaimed scientist and a timeline of that biologist's life and work.
