## **Hubble: Imaging Space and Time** David H. Devorkin, Robert Smith

In the spirit of National Geographic's top-selling *Orbit*, this large-format, full-color volume stands alone in revealing more than 200 of the most spectacular images from the Hubble Space Telescope during its lifetime, to the very eve of the 2008 final shuttle mission to the telescope. Written by two of the world's foremost authorities on space history, *Hubble: Imaging Space and Time* illuminates the solar system's workings, the expansion of the universe, the birth and death of stars, the formation of planetary nebulae, the dynamics of galaxies, and the mysterious force known as "dark energy."

The potential impact of this book cannot be overstressed: The 2008 servicing mission to install new high-powered scientific instruments is especially high profile because the cancellation of the previous mission, in 2004, caused widespread controversy. The authors reveal the inside story of Hubble's beginnings, its controversial early days, the drama of its first servicing missions, and the creation of the dynamic images that reach into the deepest regions of visible space, close to the time when the universe began.

A wealth of astonishing images leads us to the very edge of known space, setting the stage for the new James Webb Space Telescope, scheduled to launch in 2013. Find the stunning panoramic of Carina Nebula, detailing star birth as never before; a jet from a black hole in one galaxy striking a neighboring galaxy; a jewel-like collection of galaxies from the early years of the universe; and a giant galaxy cannibalizing a smaller galaxy.

Timed for the 2008 shuttle launch and coinciding with the 400th anniversary of Galileo's first telescope, *Hubble: Imaging Space and Time* accompanies a high-profile exhibit at the National Air and Space Museum and will be featured on the popular NASM website.

*From the Hardcover edition.*

### **From reader reviews:**

#### **Kathy Natal:**

Reading a guide tends to be new life style with this era globalization. With examining you can get a lot of information that could give you benefit in your life. With book everyone in this world can share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their very own reader with their story as well as their experience. Not only the storyplot that share in the textbooks. But also they write about the data about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors in this world always try to improve their expertise in writing, they also doing some analysis before they write with their book. One of them is this Hubble: Imaging Space and Time.

#### **Joshua Stamper:**

People live in this new day time of lifestyle always attempt to and must have the free time or they will get great deal of stress from both lifestyle and work. So , if we ask do people have free time, we will say absolutely without a doubt. People is human not only a robot. Then we consult again, what kind of activity have you got when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you try this one, reading textbooks. It can be your alternative inside spending your spare time, the book you have read is Hubble: Imaging Space and Time.

#### **Jesse Harrison:**

Many people spending their moment by playing outside using friends, fun activity with family or just watching TV the whole day. You can have new activity to pay your whole day by reading a book. Ugh, you think reading a book can really hard because you have to accept the book everywhere? It fine you can have the e-book, bringing everywhere you want in your Mobile phone. Like Hubble: Imaging Space and Time which is keeping the e-book version. So , why not try out this book? Let's notice.

#### **Debra Shortt:**

Is it an individual who having spare time after that spend it whole day through watching television programs or just resting on the bed? Do you need something totally new? This Hubble: Imaging Space and Time can be the answer, oh how comes? A book you know. You are thus out of date, spending your extra time by reading in this fresh era is common not a geek activity. So what these books have than the others?
